DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Invention I, claims 1-21 and 25-28 in the reply filed on 6/7/2010 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 25 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

For claim 25, the definition for "integrated circuit" according to "merriam-webster" is "a tiny complex of electronic components and their connections that is produce in or on a small slice of material (as silicon)". A mere recitation of the term "integrated circuit" can not enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification does not provide support for the integrated circuit.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 27-28 rejected under 35 U.S.C. 101 because claims are directed to non-statutory subject matter.

For claim 28, "In the start of the art, transitory signals are commonplace as a medium for transmitting computer instruction and thus, in the absence of any evidence to the contrary and give the broadest reasonable interpretation, the scope of a "computer readable medium" covers a signal per se." In order to overcome the 35 U.S.C. 101 rejection, the "computer readable medium" should be changed to "non-transitory computer readable medium".

For claim 27, the examiner treats the claim as program per se, which is nonstatutory subject matter, because the claimed "data position locating program" is not necessary executed by the recording apparatus according to the claim.

Allowable Subject Matter

6. Claims 1-21 and 26 are allowed and claims 25 and 27-28 would be allowable if the corresponding 35 U.S.C 112 and 35 U.S.C 101 rejections were overcome.
7. For claims 1, 25-28, there's no teaching or suggestion in the prior art for: an extension information obtaining unit operable to obtain extension information showing that broadcast of a program preceding the target broadcast program will be extended; a judging unit operable to judge, if the extension information is obtained, whether broadcast data being recorded after the scheduled broadcast time is segment data that is sufficiently shorter than the target broadcast program or program data; a monitoring unit operable to monitor, after the judging unit judges that the broadcast data is segment

data, whether segment data of a same type is consecutively received; an extracting unit operable to extract, if the judging unit judges that the broadcast data is program data, an end time of a piece of segment data immediately preceding the program data".
